HemaPromptTM FG

Fecal & Gastric Occult Blood Test

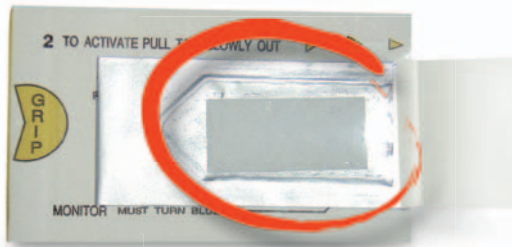

Gastric Specimens with low pH are not a problem.

Fast. Reliable. All self-contained.

What is it?

HemaPrompt FG is an FDA approved and CLIA waived, guaiac based combination test card method suitable for FECAL and GASTRIC occult blood testing.

No developer bottles!

The developer is self-contained on a reagent pad on each test card. The built-in developer ensures standardization of application amount.

Fast results.

There is no wait time after specimen application, your results are available in 1 minute.

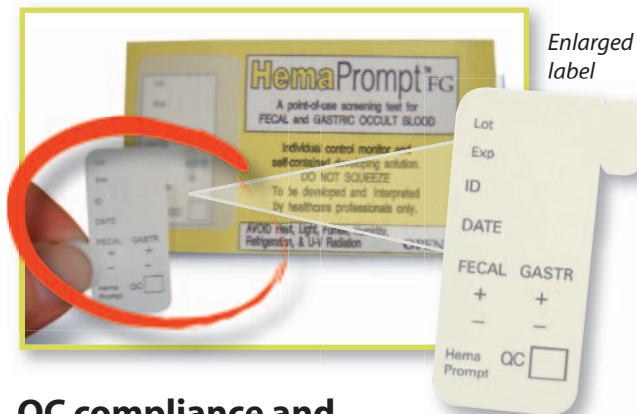

A buffer has been added...

to the guaiac paper of the test card to adjust the pH value of the gastric specimen accordingly, so the test reaction of a low pH specimen is not compromised.

On-board QC monitor

The on-board QC monitor on each test card shows the test has been performed correctly.

QC compliance and result charting are easy

A removable label containing test card information may be placed on the patient chart, along with test results.

About the HemaPrompt product

- Developed by a physician, HemaPrompt FG is an FDA approved and CLIA waived test system for fecal and gastric occult blood.
- The HemaPrompt test system is designed to be used by medical professionals only.
